

The six questions your board will ask about cyber.

Every board now owns cyber risk. These are the six questions that surface it — and, beneath each, what a good answer sounds like. Bring this to your next meeting.

01 What is our single largest cyber risk — in dollars — and who owns it by name?

A GOOD ANSWER A number and a named executive. Silence here is what a board minute records.

02 What would a ransomware event actually cost us — recovery, downtime, and regulatory penalty combined?

A GOOD ANSWER A range, modeled from our operations. Not “we have backups.”

03 Are we adequately insured — and would our insurer agree?

A GOOD ANSWER Evidence our carrier has already accepted. Renewals now turn on it.

04 Who is governing our AI systems — and what is our liability if one makes a bad decision?

A GOOD ANSWER A named owner and a record. For most organizations this answer does not yet exist.

05 If systems went down tomorrow, how long until we recover — and at what cost per hour?

A GOOD ANSWER A rehearsed number, not an assumption discovered during the incident.

06 If a regulator asked us to prove our cyber governance today, what would we hand them?

A GOOD ANSWER A documented trail, prepared before the letter arrives.

If any answer is “not confidently,” that gap is the conversation.
